

ENVIRONMENTAL COMPLIANCE 2025

- The photovoltaic panels on the roof of the two buildings (where we have 104.3 kWp installed), have generated 143561.74 kWh this year.
- The installation of the photovoltaic station has resulted in a saving of 91.6 tonnes of CO₂ by 2025
- We buy green energy, which represents a saving of 35.19 Tm of CO₂ compared to the market average.
- We buy the energy from the grid green, which means a saving of 153.87g of High-Level Radioactive Waste compared to the market average.
- The carbon footprint of the company's scope 1, 2 and 3 has been calculated for 2025 to study ways to reduce it. In this case, the purchase of raw materials has been added in addition to the transport of raw materials and finished products.
- We have an electric vehicle and a hybrid vehicle, and we have begun to allow the charging of electric vehicles for workers.
- All forklifts are Electric.
- Meetings have been held by skype, teams, company WhatsApp, etc., saving travel and therefore reducing emissions, consumption of resources and time.
- The 2x5 format in cardboard boxes is continued to minimize the plastic placed on the market.
- The expiry dates of some products are reviewed to extend their useful life and thus delay the possibility of them becoming waste.
- Articles with low turnover have been discontinued.
- Used Panter shoes continue to be sent for recycling.

Carbon footprint Year 2025:

% Emissions t CO₂eq 2025 sense adquisició de matèries primeres

% Emissions t CO₂eq 2025 amb adquisició de matèries primeres
